### Professional Summary

Senior cybersecurity leader with over three decades of experience spanning threat intelligence, penetration testing, malware analysis, and cyber operations. Proven ability to lead high performing teams, develop advanced detection and response capabilities, and bridge technical and executive priorities to strengthen enterprise security posture. Recognized for combining deep technical expertise in reverse engineering and exploit development with strategic leadership across cross-functional teams.

### Core Competencies

Cyber Threat Intelligence | Leadership & Mentoring | Incident Response | Penetration Testing | Reverse Engineering | Exploit Development | Network & Endpoint Security | Cross-Functional Collaboration | Executive Reporting | Security Policy Development | Malware Analysis

### Professional Experience

#### **Wells Fargo – 2018–Present | Executive Director / Senior Lead Cybersecurity Research Scientist**

Serve as a strategic cybersecurity leader within Cyber Threat Management (CTM), partnering across multiple lines of business to identify, prioritize, and mitigate enterprise security risks. Act as a trusted advisor to senior stakeholders and executives, translating complex technical findings into clear, actionable insights that inform risk-based decision-making.

- Led enterprise identity risk analysis initiatives using BloodHound to identify and prioritize complex attack paths and privilege escalation risks across hybrid Active Directory and Azure environments, uncovering over 20 critical findings and driving actionable remediation efforts that strengthened security controls, reduced systemic risk, and improved the overall enterprise security posture.
- Conducted and guided advanced security assessments of enterprise applications and supporting infrastructure, identifying systemic vulnerabilities and recommending mitigation strategies aligned to evolving threat intelligence.
- Drove cybersecurity initiatives to advance application and offensive security capabilities, including the development of an AI-enabled binary analysis capability leveraging advanced AI models to identify complex software vulnerabilities and simulate exploit paths. Applied AI capabilities in alignment with enterprise data security, ethical use, and governance standards to ensure responsible adoption within cybersecurity workflows.
- Led and aligned cross-functional teams across CTM (~120+ resources) and enterprise partners to deliver strategic cybersecurity initiatives and measurable risk reduction outcomes. Championed technical innovation and talent development by mentoring cybersecurity

professionals and technology partners across the enterprise, including through the Wells Fargo mentorship Program.

#### **Nuix – 2015–2018 | Director / Principal Cybersecurity Consultant, Malware Analysis**

Led the malware analysis and reverse engineering function at Nuix, supporting incident response and penetration testing teams through advanced analysis of malicious code and threat artifacts. Applied deep reverse engineering expertise to identify malware capabilities, behaviors, and indicators, enabling rapid triage, classification, and response to emerging threats.

- Directed research into novel exploits and attack methodologies used by the red team in external penetration testing engagements.
- Mentored analysts in advanced reverse engineering and tooling.
- Provided subject matter expertise supporting both internal IR and external consulting engagements.

#### **ISC8 – 2012–2014 | Senior Manager – Malware Research Team**

Managed and led a team of reverse engineers and malware analysts, providing technical direction and oversight to support the development of advanced detection capabilities for identifying malicious activity in network environments. Established team priorities, mentored analysts, and drove execution of research initiatives. Designed and implemented detection logic and rules to identify malicious traffic and network anomalies.

- Defined and executed the strategic vision for the malware research function, leading the development of novel detection techniques to identify network anomalies indicative of malware and adversarial activity. Partnered with product and engineering teams to integrate these capabilities into ISC8-developed solutions, enhancing the effectiveness of security monitoring and threat detection.
- Designed and developed sensors, detection rules, and analytical methodologies to identify complex malicious behaviors within network traffic, enabling improved visibility into emerging threats and strengthening the organization's ability to detect and respond to adversarial activity.

#### **MacAulay-Brown, Inc. – 2011–2015 (Part-time 2012–2014) | Senior Malware Reverse Engineer**

Led a team of malware reverse engineers at a customer site, providing technical leadership and oversight across reverse engineering, malware analysis, binary exploitation, and secure software development activities. Directed day-to-day operations and ensured delivery of high-quality security research aligned to customer mission objectives.

- Performed detailed malware deconstruction and authored technical reports for operational use.
- Designed and implemented proof-of-concept exploits and decryption tools for use in field operations.

- Trained junior engineers and customer personnel in reverse engineering techniques.

### **General Dynamics AIS – 2003–2011 | Senior Software Engineer (2006–2011)**

- Conducted malware analysis, incident response, and forensic support for GD-AIS Cyber Division clients.
- Led development of reverse engineering training programs and analysis tools.
- Supported law enforcement activities involving digital forensics and chain of custody.

### **Senior UNIX Administrator (2003–2006)**

- Administered and secured a 1,000+ node network supporting multiple operating systems.
- Developed and implemented division-wide network security strategies.
- Led internal incident response initiatives across a 20,000+ node enterprise.

### **Earlier Career (1995–2003)**

Lansing State Journal – Publishing Systems Coordinator

General Inspection, Inc. – Manager of Information Systems

State Employees Credit Union – Network/Computer Technician

Lansing Community College – Computer and Network Technician

### **Education**

MBA – Leadership/Cybersecurity, Southern Utah University (2026)

MS – Cyber Security and Information Assurance, Southern Utah University (2018)

BS – General Studies, Southern Utah University (2016)

### **Certifications**

GIAC GREM – GIAC Reverse Engineering Malware (Cert #2338, 2010)

GIAC GCPN – GIAC Cloud Penetration Tester (Cert #1793, 2024)

GIAC GMLE – GIAC Machine Learning Engineer (Cert #648, 2025)

Azure Fundamentals (AZ-900)

Google Cloud Digital Leader

Google Cloud Associate Engineer

CCNA – Cisco Certified Network Associate (2002, expired)

### **Military Service**

U.S. Army Reserve (1994–2004) – Honorable Discharge
